## Office 2016- Excel Basics 12

## Video/Class Project \#24

Excel Basics 12: Formula Types and Formula Elements

Goal in video \# 12: Learn about the different types of formulas and learn about the different formula elements.

Topics Covered in Video:

1) Types of Formulas in Excel:
i. Number formulas that deliver a single number answers such as a tax deduction amount or a budgetary expense amount.
ii. Text formulas deliver a text item such as a name or category.
iii. Logical formulas (Boolean Formulas) deliver a TRUE or FALSE.
2) The types of Formula Elements that are allowed in formulas are:
i. Equal sign, =
ii. Cell references, like A1, \$A\$1, A1:A10, \$A\$1:\$A\$10
iii. Math operators, $,,+, ?,{ }^{*}, \wedge$, and ()
iv. Numbers (if they won't change)
v. Built-in Functions, like SUM and ROUND
vi. Join operator: Ampersand (\&)
vii. Text within quotation marks, like ", "
viii. Comparative operators, > \ll, >=, <=, =, <>
3) Join Operator $=$ \& = Ampersand or And Symbol
i. Join Operator allows to join to items together into one cell, like joining First and Last Name
ii. Formula like; ="Item \#"\&C43 joins text in double quotes and a number from a cell
iii. Antitime you have to put text into a formula, you must use Double Quotes
iv. "Item \# " will not change
4) Text String
i. "Text String" is the term used to describe words or text.
ii. Examples"
1. "Excel" is a Text String
2. "Product name is Quad" is a text string
3. 100 is not a Text String because it is a number
5) Text Functions:
i. LEFT
1. LEFT will extract from the left (start of text string) a specified number of characters in the text string.
2. LEFT(text, [num_chars])
i. text = The text string that contains the characters you want to extract.
ii. num_chars = Specifies the number of characters you want extract from the left, where 1 is first character, 2 is second character and so on.
ii. RIGHT
3. RIGHT will extract from the right (end of text string) a specified number of characters in the text string.
4. RIGHT(text, [num_chars])
i. text = The text string that contains the characters you want to extract.
ii. num_chars = Specifies the number of characters you want extract from the right, where 1 is last character, 2 is second to last character and so on.
6) Math Operators

Math Operators.

| + | Adding. | Remember Order of Operations in Math: |
| :--- | :--- | :--- |
| - | Subtracting or Negation. | 1) Parentheses |
| $*$ | Multiplying. | 2) Exponents |
| $/$ | Dividing. | 3) Multiply \& Divide, Left to Right |
| $\wedge$ | Raising to an exponent. | 4) Adding and Subtracting, Left to Right |
| () | Parentheses. |  |

7) Math Oreder of Operations:

Remember Order of Operations in Math:

1) Parentheses
2) Exponents
3) Multiply \& Divide, Left to Right
4) Adding and Subtracting, Left to Right
5) Comparative Operators:

## Comparative Operators.

$=\quad$ Equal: are two things equal?
<> Not: are two things not equal? Type less than symbol, then greater than symbol.
> Greater than: is the thing on the left greater than the thing on the right?
$>=\quad$ Greater than or equal to: is the thing on the left greater than or equal to the thing on the right?
$<\quad$ Less than: is the thing on the left less than the thing on the right?
$<=\quad$ Less than or equal to: is the thing on the left less than or equal to the thing on the right?
9) Excel's Formula Calculation Order:
1 Parenthesis ( )
2 Reference Operators: colon, comma
Example of colon in range of cells: =SUM(A1:A4)
Example of comma (union): =SUM(E10:G10,E14:G14)
3 Negation (-)
Example: $=-2^{\wedge} 4=16$
$\quad$ Example: $=-\left(2^{\wedge} 4\right)=-16$
4 Converts $\%(1 \%$ to .01$)$
5 Exponents (^)
$\quad$ Example: $3^{\wedge} 2=9$
6 Multiplication (*) and Division (/), left to right
7 Adding (+) and Subtracting (-), left to right
8 Ampersand (\&)
9 Comparative symbols: $=,<>,>=,<=,<,>$
10) Video examples:

| 4 | A | B | c | D |
| :---: | :---: | :---: | :---: | :---: |
| 18 | Ex 1 | Goal: Add calls made a service center last week. <br> Type of Formula: Number Formula. <br> Formula Elements: Equal Sign, Built-in Function, Range of Cells |  |  |
| 19 |  |  |  |  |
| 20 |  |  |  |  |
| 21 |  |  |  |  |
| 22 |  |  |  |  |
| 23 |  | Day | Calls |  |
| 24 |  | Mon, 10/30/17 | 671 |  |
| 25 |  | Tue, 10/31/17 | 374 |  |
| 26 |  | Wed, 11/1/17 | 586 |  |
| 27 |  | Thu, 11/2/17 | 637 |  |
| 28 |  | Fri, 11/3/17 | 1007 |  |
| 29 |  | Sat, 11/4/17 | 549 |  |
| 30 |  | Sun, 11/5/17 | 556 |  |
| 31 |  | Total | 4,380 | =SUM (C24:C30) |

| 4 | A | B |  | D | E | F |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 33 | Ex 2 | Goal: Calculate Monthly Insurance Expense. <br> Type of Formula: Number Formula. <br> Formula Elements: Equal Sign, Cell Reference, Math Operator, Number. |  |  |  |  |
| 34 |  |  |  |  |  |  |
| 35 |  |  |  |  |  |  |
| 36 |  |  |  |  |  |  |
| 37 |  |  |  |  |  |  |
| 38 |  | Annual Insurance | \$13,500.00 |  | ** 12 months in year can not change |  |
| 39 |  | Monthly Allocation | \$1,125.00 | =C38/12 | We are not violating Excel's Golden Rule |  |

| 183 |  | Wage Expense | \$22,000 |  |
| 184 |  | Operation Expense | \$11,500 |  |
| 185 |  | COGS | \$69,570 |  |
| 186 |  | Net Income | \$10,130 | =C181-SUM(C182:C185) |

11) Don't forget Excel's Golden Rule:

## Excel's Golden Rule:

If a formula input can change, put it into a cell and refer to it in the formula with a cell reference.

If a formula input will not change, you can type it into a formula (like 12 months in a year or 7 days in a week).

Always label your formula inputs so that the formula input can be clearly understood by any user of the spreadsheet solution; by doing this we properly "document the spreadsheet solution (model).
12) Formula Evaluator (Evaluate Formula feature) to see how formula is calculated by Excel
i. Click in cell with formula.
ii. In Formula Ribbon Tab, in the Formula Auditing Group, click the Evaluate Formula button.

1. The button may look like this large button (Your screen is wide, or your screen resolution is high):

| Formulas | Data | Review | View | Developer | Add-ins | ACR | Power Pivot | Q Tell me what you w |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Text Date \& - Time ${ }^{-}$ n Library | Lookup \& Reference - | Math \& Trig ${ }^{*}$ | More Functions * | Name <br> Manager | efine Name se in Forms reate from hed Names | ction | 몾ㅈㅁ Trace Precedents <br> 䨐 Trace Dependents <br> $\$$ Remove Arrows | Show Formulas <br> Error Checking <br> Evaluate Formula <br> mula Auditing |

2. The button may look like this small button (Your screen is narrow, or your screen resolution is low):

iii. Then you will see the Evaluate Formula dialog box, like this:

iv. Click Evaluate button or use Enter to watch each step that Excel uses to evaluate or calculate your formula!
v. In this example we can see that the Math Operator, Subtraction, will be calculated BEFORE the Comparative Operator, "Greater Than".
